The College is also awarded "A+" grade by NAAC. With the support of highly qualified and experienced faculty members, the college has been nurturing the society with great number of industrialists, academicians and students who are successful in India as well as abroad.

About the Seminar

Excipients are crucial to drug delivery within the body. Generally, an excipient has no medicinal properties. Its standard purpose is to streamline the manufacture of drug product and ultimately facilitate physiological absorption of the drug. Excipients might aid in lubricity, flowability, disintegration, taste, and may confer some form of antimicrobial function. Selecting the appropriate excipients to support the design of your pharmaceutical formulation is an important step in the drug manufacturing process. A carefully chosen excipients may reduce manufacturing costs by being multifunctional, or may enhance patient experience by offering taste masking properties. An excipient must best suit the intended dosage form of the drug, demonstrate great organoleptic properties, conform to pharmacopeial regulations, be easy to source, and work effectively.
